HYMENEAL. MARRIED - SCHILL-SCHOOPS - At the Holy Trinity church in Kewaskum, on Tuesday, Nov. 24, 1896, by Rev. Ph. Vogt, William Schill to Theresa Schoofs.

The bride was attended by Misses Clara Zwatschka and Jennie Schoofs, while the groom's men were Joseph Schoofs and Nicholas Schill.

After the ceremony the happy couple and a large number of invited relatives and friends repaired to the home of the brides parents, where a wedding festival was held and numerous and precious presents were received by Mr. and Mrs. Wm. Schill.

The groom is a son of Peter Schill of Ashford while the bride is a daughter of Mr. and Mrs. John Schoofs; and we join with a host of the friends of both families in wishing the young voyagers a happy and prosperous trip upon the matrimonial sea of life.

They will reside upon the farm of the groom's father, in the town of Ashford.

Synopsis of Proceedings of the County Board. The following committees were appointed at the first day's session, after all members had reported "present" except E. Partell of Erin:

Court Claims - P. C. Schmidt of Barton; George Moulster of the town of Hartford, J. J. Hose of Wayne, H. Bohm of the town of West Bend, and Charles F. Roth of Schleisingsville.

General Claims - G. W. Root of the city of Hartford, Albert Dunan of Farmington, John Koch of Polk, Phil. Konrad of the city of Hartford, and Michael Salter of Trenton.

Treasury - Philip Schmidt of Kewaskum, A. Rosenheimer of the village of Kewaskum, and J. Thielges of the city of West Bend.

Equalization - Chris. Reis of Jackson, J. A. Christnach, of Addison, G. W. Root, J. J. Hose and J. Thielges.

County Farm and Buildings - Thos. Hayes of Richfield, E. Partell of Erin, Wm. Klumb of Germantown, Philip Schmidt, and Chris. Reis.

Assessment and Taxes - J. A. Christnach, G. Moulster and P. C. Schmidt, Jury List - John Koch, Charles Roth and William Klumb.

Salaries - Michael Salter, Albert Duncan and Thomas Hayes. Asylum and Pauper Accounts - A. Rosenheimer, Philip Konrad and Geo. Moulster.

The second day's proceedings (Nov. 11) consisted of allowing bills as presented by the committee on general claims, reading and deferring action until the following Friday on a state semi-centennial celebration, fixing the bonds of the county officers elect, and referring the report of the superintendent of county poor to the proper committee.

The third day's session was spent in allowing bills as reported by committees, hearing and referring reports from the district attorney and superintendent of public property; also deferring action upon a motion to elect a sup't of poor and a janitor until the following day.

On Nov. 13th the session was spent in allowing \$480 for janitor services for the ensuing year, allowing bills as reported by committees except a few which were referred back to proper committees, accepting the bond of the sheriff elect, referring reports from the county clerk, the treasurer and the superintendent of public property; also, authorizing the chairman to appoint a committee on the semi-centennial, electing G. W. Jones superintendent of poor and Chas. Koelle janitor.

The following day's session was devoted to hearing and adopting resolutions appointing Andrew Schmidt sup't of public property appertaining to the several county offices, court house and jail and authorizing him to contract for all necessary furniture, repairs, etc., and appropriating \$800 subject to his orders; also, to acting on some bills and appointing a committee to ascertain the amount expended for county printing during the past year.

The 16th inst. was spent in adopting a resolution to let the county printing to the lowest bidder, instructing the treasurer to renew all expired insurance policies on county buildings, hearing report of the committee on general claims, and adopting a motion instructing district attorney to collect amount due from Dodge county on the Bergman killing by a train at Schleisingsville in 1895.

The next session (Nov. 18) was spent allowing bills reported by committees, hearing and filing report of committee on cost of printing, deferring action on report of committee on insane asylums, an referring report of sup't of public property to committee on county farm.

Literary Society Meeting. There was a meeting of the young people of Kewaskum in the public school house on Friday evening, Nov. 20, for the purpose of organizing a literary society for the winter. It was fairly well attended, and it was decided to hold the next regular meeting at the same place on Friday evening, Dec. 4, and from that time every Friday evening thereafter.

It is unnecessary to state here the benefits derived from being a member of a literary society, as they are apparent to every one; and so it is hoped that many more will be present at the next meeting, at which a good programme will be rendered. A cordial invitation is extended to all interested in literary work.

The following officers were elected for a term of one month: Gustav Koepke, president; Lorenz Berges, vice-president; Rose Hoeng, secretary; and Augusta Schmidt, treasurer.

WISCONSIN'S RESOURCES are attracting general attention, and its railroads furnish the means to develop them. The limitless iron ore deposits of the Penokee and Gogebic Iron Ranges provide abundant opportunity for the establishment of Iron Furnaces and general iron working industries. Hardwood timber in great quantities attracts manufacturers of all wood articles including Furniture, Woodenware, Slaves, Headings, Hoops and Veneering; the Granite and Lime Stone quarries are attracting attention, as their quality is unsurpassed for fine building work and strong lime. Numerous Clay, Kaolin and Marl beds furnish the best material for Tile, Brick and Pottery.

All of these materials are located on the line of the WISCONSIN CENTRAL, and any one who desires to locate a manufacturing is requested to write us, as we desire to confer with everyone who wants a good location with facilities for reaching markets everywhere.

3-FACTS FOR THOUGHT-3. 1. Dealers having the best equipped shop and workmen can make the best work. 2. The best work costs more than the cheap, poorly executed work. 3. Good work will always bring trade, and is most profitable for the people to buy. Parties who appreciate this class of work should call, examine goods and get my prices before placing an order for anything in my line. Bear in mind, I carry the most complete and one of the largest and best stocks of any shop in the state or northwest, and I can and will do just what I say. West Bend Marble Works P. W. HARNIS.

**Eyes**  
Eyes and nose are all more or less affected by catarrh. The eyes become inflamed, red and watery, with dull, heavy pain between them; there are roaring, buzzing noises in the ears, and sometimes the hearing is affected; the nose is a severe sufferer, with its constant, uncomfortable discharge. All these disagreeable symptoms may be removed by the use of

**Gov. Morton's Silos**  
The corn crop of Gov. Morton's Ellerslie farm this year covered 200 acres, in four or five lots, the largest being 91 acres. It was cut by a patent harrow, carried to the barn on wagons, cut up by a machine which handles one ton in two minutes, and carried by elevators into three silos 40 feet deep, to supply 225 cattle during the winter. The cutter is run by steam, the harrow by horsepower. Eighteen teams were employed and forty-three hands, including twenty head of stock, were required to harvest the crop. One man to hold horses at a time, one weighmaster—Kingston (N. Y.) Freeman.

**No Runaways in Russia**  
Runaway horses are unknown in Russia. No one drives there without having a thin cord with a running nose around the neck of the animal. When the horse bolts the cord is pulled and the horse stops as soon as it feels the pressure on its windpipe.—Boston Budget.

**Young Girls**  
Their Conduct and Health Often Mystify Their Mothers.  
Young girls often feel and consequently act, very strangely. They shed tears without apparent cause, are restless, nervous, and at times almost hysterical. They seem absorbed, and heedless of things going on around them. Sometimes they complain of pain in lower parts of body, flushes of heat in head, cold feet, etc.

**Young girls are not free from incipient womb troubles.**  
Mothers should see to it that Lydia E. Pinkham's Vegetable Compound is promptly taken; all druggists have it. The girl will speedily be "herself again," and a probable danger be averted. Any information on this subject, or regarding all female ailments, will be cheerfully given free by Mrs. Pinkham, at Lynn, Mass. Write her.

**Unearthed a Mummy**  
John Winter, while digging a cellar on Elk Creek, Ky., excavated a mummy and it is the most perfect of its kind. The mummy was that of a man of great stature, probably 8 feet. It was wrapped in a thick, yellowish material, and was placed in a casket-like coffin. In a few minutes after placing it in the air it crumbled away. A few inches of the body were left, and a few cooking utensils and a large hollow stone, which presumably once contained food for the mummy, were found. It is said that at his feet a skin shield, which also crumbled into dust, and the head of a mummy, which was found several feet deeper, but discovered nothing more than a handsomely carved pipe and a few pieces of broken crockery.

**Wheat Will Fatten Hens**  
While it is true that wheat is a better feed than corn for egg production, some caution needs to be used in feeding it to poultry. Hens are more greedy for wheat than for any other grain, probably because instinct teaches them that this grain contains just what they need for every purpose. But it is a mistake to suppose that wheat with the phosphate of lime it contains does not also furnish the fat-forming matter that needs to be given to fowls in moderation. Hence there ought to be light rations of wheat, with some chopped clover hay and vegetables like cabbage or turnip, to give variety and fill the gizzard without furnishing too much nutriment.

**Sheep Per Acre**  
It is frequently asked how many sheep can be kept on an acre. Prof. Shaw tells us that on the experimental farm last year they kept six ewes and ten lambs on one acre of land for five and a half months. This, however, we think would be too high an estimate for the ordinary acres and ordinary management. The best way to estimate any kind of heritiveness or carrying stock is by the pound rather than by the head. There will not be a very great difference between the amount of grass consumed by a thousand pounds of beef, horse, or sheep. With hogs it is different because they are not usually dependent on grass for their feed, and hence a greatly increased number of pounds can be kept per acre when hogs are fed a grain ration. We are, of course, speaking of stock animals and not of cattle that are kept on full feed, corn, and other grain, and allowed all the grass they will eat.—Exchange.

**Hints from Horsemen**  
There is undoubtedly a scarcity of first-class horses in the leading horse markets, and a surplus of inferior ones. There is nothing so good for bedding as good, long rye straw, and it has the preference over anything else, but most colts should be educated from the

**A COON PULLING IN MAINE.**

Many Dogs Worsted Before Jeff Won the Fight by Novel Tactics.  
Abe's coon pulled the way he held in the cellar under his store. They began about 9 o'clock at night, or so soon thereafter as the women and children of the late dogs have a chance at him. About thirty men and twenty dogs attended the 1896 pulling, which was held in the late dog's house. The coon was put into a flour barrel and headed up until he was taken to the cellar and the spectators were allowed to see the coon. The coon was unheeded and laid on its side with the end facing the crowd of men and dogs.

Sam, an old collie belonging to Fred Archer, was the first dog to take a tilt with the coon. He did not stop to sniff around the barrel, but plunged in head first and tried to grapple with the coon, holding his long, peaked nose well down in the flour. After making a few vain attempts under his nose and grab it by the windpipe. The coon waded until they were nearly to the top of the barrel, and then bringing the two back to back. As the dog shot ahead under full speed the coon pulled for the good of the barrel, and the grip and claw like a patent corker. For half a minute waded with silky collar hair, and then the coon was seen to pour from the barrel like chaff from a winnower. These were the only dogs who were allowed to enter the barrel, and when the noise was loudest out came Sam with his tail between his ears, yelling so loud that the spectators let him out. The coon, having revolved on his side, was all right, laid himself down facing the crowd, and was ready for more.

Clowley's manner was to keep up the next effort, but he had evidently made coons before and refused to sacrifice himself for the good of the barrel. He was found from Otis and a mongrel from Ellsworth Falls were soon whipped out of the barrel. The coon was then given a full carrier that followed the nail stage was invited to go in. The terrier received two or three licks, and then the coon's foreleg just above the paw, causing the coon to do a great deal of spitting and several other things which amounted to nothing. The coon pitched somersaults in the barrel, vainly trying to bring his hind legs up under his head. He was then over and over they went like the fans of a windmill, and every time the dog came on top his tail was up and he was his situation first rate. The excited men, holding lanterns in front of the barrel, were every second shouting to the dogs and yelling to one another to stand back. About this time two white dogs came on top of the barrel, and were mad as well as sore, and therefore they were not allowed to enter the barrel. Old Jeff, a hound with a score of dead coons to his credit, being called, stepped into the barrel, and the coon was backed out dragging the terrier after him. As the dog gave no sign of letting the coon go, the coon was then put into the barrel, whereupon both dogs forgot their anger and jumped for the coon.

When the coon was at last put into another barrel, three or four badly scratched men in the cellar, who were mad as well as sore, and therefore they were not allowed to enter the barrel. Old Jeff, a hound with a score of dead coons to his credit, being called, stepped into the barrel, and the coon was backed out dragging the terrier after him. As the dog gave no sign of letting the coon go, the coon was then put into the barrel, whereupon both dogs forgot their anger and jumped for the coon.

**Why Fruit Trees Die**  
Why so many nursery grown trees die when transplanted is tersely and truthfully stated in Bulletin No. 20, of the Oklahoma Experiment Station. It says: Among the causes of failure have been the following: Failure to prepare the land before trees arrive; high banks, exposing the body of the tree to sunscald and attacks of borers. Planters are urged to set strong, healthy trees, in well prepared soil, plowed deep and sub-soiled, first pruning the roots to one or two inches in length, which will cause them to strike down deep into the soil before trees arrive; shallow and imperfect planting; high banks, exposing the body of the tree to sunscald and attacks of borers. **Why Fruit Trees Die**  
Why so many nursery grown trees die when transplanted is tersely and truthfully stated in Bulletin No. 20, of the Oklahoma Experiment Station. It says: Among the causes of failure have been the following: Failure to prepare the land before trees arrive; high banks, exposing the body of the tree to sunscald and attacks of borers. Planters are urged to set strong, healthy trees, in well prepared soil, plowed deep and sub-soiled, first pruning the roots to one or two inches in length, which will cause them to strike down deep into the soil before trees arrive; shallow and imperfect planting; high banks, exposing the body of the tree to sunscald and attacks of borers. Planters are urged to set strong, healthy trees, in well prepared soil, plowed deep and sub-soiled, first pruning the roots to one or two inches in length, which will cause them to strike down deep into the soil before trees arrive; shallow and imperfect planting; high banks, exposing the body of the tree to sunscald and attacks of borers.

**Barn for Dairy Purposes.**  
A common barn can be easily and cheaply changed into a dairy barn of large capacity, by employing such a plan as that shown in the first illustration. Two wings, with "shed" roofs, are extended out at right angles from each side of the old barn at one end.

**Horticulture.**  
Burn all the wood cut out of black and raspberries, so as to destroy the eggs of insects.

**Keep it in mind,** that like begets like, as much so among plants as it does among animals.

**There is no advantage** in mulching strawberry plants or fruit trees until the ground freezes.

**Bank up young apple trees** to the height of fifteen inches; it will have a great tendency to keep the mice and rabbits from girdling them.

**With a growing young orchard** the farm will augment in value in your own eyes as well as in those of your neighbor, and you will be very independent in making a figure.

**Too little attention is paid** to the quince as a market fruit. What few trees there are in the country find the business a very paying one, and there is room for more without crowding the market.

**The West Indies are very rich** in forest trees. Many of these are turned to singular uses. The bark of the prune tree is used in the making of a liquid for the treatment of the wood.

**Some one has suggested** for those who have to darn stockings for boys of careless activity that for a large hole is a good idea to take a piece of coarse net and tack it lightly to the stocking, and then darn it through the net and well over the stocking. The net makes a firm foundation, and the work is more quickly done, besides being better and smoother when finished.

**For one pie take three heaping** table-spoons sifted squash or pumpkin, one heaping tablespoon flour, one and one-half pints rich milk. Mix squash or pumpkin smooth with flour; add milk. Sweeten to taste, add a tiny pinch of salt, and mix thoroughly. Pour into a deep pie-plate lined with good pie-crust and bake in a slow oven—Ladies' Home Journal.

**For one large loaf of bread use** three pints of sifted cornmeal, three pints of rye flour, one cup of good yeast and one cup of molasses. Mix very soft with warm water, pour the mixture into a round pudding tin and allow it to stand until light. Bake with a steady fire for three hours.—Ladies' Home Journal.

**Macaroni Souffle.**  
Rub smoothly three-quarters of a pound of macaroni paste with two pounds of sugar and sufficient white of egg to thin it. Beat the remaining whites of eight eggs very stiff, and mix together. You may add one handful of flour. Bake on greased, four-dusted pans.

**Waterproof Apron.**  
The best kind of an apron to use when bathing the baby is made of two thicknesses of flannel, with a piece of rubber cloth between. The rubber prevents all possibility of the dress getting wet, and can easily be removed when laundered.

**Helpful Hints.**  
Keep the feet of the child scraped thin, and the edges will turn up instead of under.

**Remember that potatoes** grated and applied as a poultice is a quick and sure relief for scalds and burns.

**Remove insects from the ear** with warm water. Never use a probe or other hard substance lest you perforate the drum.

**When dust gets into the eyes** avoid rubbing with the fingers, but dash cold water into them. Remove cinders with a camel's-hair brush.

**The mother should demand** that the school house be comfortable. Many children have stekened and died because the school house was not fit for a pig to stay in.

**To Iron Shirts.**  
Before ironing, dip shirt bosoms, cuffs and collars into a thin, cold starch, using only a trifle of starch for the bosoms, but more for the collars, cuffs, neckbands and wristbands. Fold the back of the shirt through the center lengthwise—not including the front in this fold—and iron it on both sides. Next iron and polish the wristbands, finish the sleeves, taking care to iron them to proper shape. For the neckband, give it its proper curved shape by placing it right side down on the board and pressing the point of the iron firmly upon the end nearest you, leaving an inch exposed to grasp with the fingers; pull it slowly from under the iron, lifting it up from the board close to the edge of the iron, until the entire length has been drawn from under the iron; repeat this until the desired curve is obtained. Curve collars, cuffs and wristbands likewise. Tuck the shirt by the shoulders and turn it front upmost on the board, iron the unstarched portion of the front, then insert the shirt-board. Pull into shape and iron the bosom smooth and dry, being careful not to iron in wrinkles. Iron out with the point of iron before the linen becomes dry; if dry, wet the spot with a damp cloth, then iron out. For possible, have the convex iron hot as possible, have the shirt-board covered with the iron thickly covered with but one thickness of linen. Dampen the surface with a wet cloth. Polish by passing the iron quickly across from side to side and then from base to neck, using considerable pressure and working with the back of the iron as far as possible. Polish collars and cuffs likewise.
